

## Technical information about decorative varnishes

### File delivery:

Decorative varnishes encompass a wide variety of varnishes with a multitude of printing processes. Please ask us directly about the best way to set up the data for your chosen finish.

### Characteristics:

The range and scope of various varnishes and their possible combinations are manifold. Their application/printing processes also vary. New varnishes are constantly being developed, and some become very established in the trade; others less so. It is very difficult to give a detailed overview here. Please contact us so we can send you the appropriate information in good time for your project.

### Combinations:

We would be pleased to provide you with information about possible combinations. It may be necessary to carry out compatibility tests.

### Tips:

In the case of new varnishes or finishing combinations that we have not yet tested, the production time and the subsequent delivery dates can be affected. It would therefore be very helpful if any mock-ups or designs/drafts could be sent to us at the earliest possible opportunity.

All technical specifications relate to internal, in-house manufacture. Should you have any further questions that have not been covered here or that need to be covered in greater detail, please get in touch with us.
